

Jason Roschmann

Junior Software Engineer · AI Automation

I build AI automations – and make their behaviour verifiable.

Email: jason@roschmann-digital.de | Phone: +49 155 612 953 91

LinkedIn: linkedin.com/in/jason-roschmann-1091512b2 | GitHub: github.com/JasonRoschmann | Web CV: jasonroschmann.github.io/cv

Location: Hamburg, Germany | Looking for: Hamburg or remote; relocation to Zurich possible for the right role | Start date by arrangement

Core stack: Python, FastAPI, TypeScript, React/Next.js, PostgreSQL, Docker

Profile

I build AI automations and web applications with Python and TypeScript, on my own and in a team. My experience includes API integration, background jobs and targeted tests against duplicate actions and data loss. I use AI agents for implementation; I define the requirements for my contributions and verify that they are met. I am looking for a junior role in AI automation or backend/full-stack development.

Projects

Flowki Studio — Clip Studio (team project, Aug–Sep 2026)

Purpose: internal social media studio with trends, platform playbooks and an AI content pipeline. The clip studio turns long videos into shorts — my focus. 64 pull requests in Flowki Studio, 50 of them merged.

- Speaker reframe: face position measured at several points in time instead of once, smoothed into piecewise-constant 9:16 keyframes — the crop follows the person speaking.
- Deterministic re-render after corrections: append-only plan versions, every plan change invalidates a previously granted approval; rendering runs asynchronously on Celery, without model costs.
- Up to three cut variants per clip, at most one per target account (database constraint); fixes for stuck jobs and a production that was triggered twice.
- Stack: Python, FastAPI, Celery, SQLAlchemy/Alembic, PostgreSQL, Redis, MinIO, Next.js

Debugging case study — hermes-studio (contribution to a third-party project, Sep 2026)

- Cause: 21 failing tests, two root causes — 20× an SQLite handle that was never closed and blocks cleanup on Windows; 1× an outdated test against a security rule.
- Fix: handle closed, security rule kept, test corrected. In a separate contribution, I fixed silent data loss in the task store and added five tests.
- Evidence: mutation test — deliberately weakening the security rule made the corrected test fail. Test suite from 177 to 199 passing tests.
- How I work with AI agents: every bug first as a failing test, the agent implements, a second model provides an additional review, rollout with checksums and automatic rollback.

AI-assisted job application management (personal project, since July 2026)

Purpose: Python pipeline for job search via job board APIs (including the German Federal Employment Agency, Greenhouse, Lever), cover letters, checks, sending and reply matching. Focus: traceable actions. 94 Python files, 56 of them test files.

- Shared ledger of all outbound actions with reservations: no duplicate application across email and portal, at most one application per company within 14 days.
- Blocking checks before sending: unusable model output stops the run; model cascade (Claude, Gemini, Groq) with cool-down periods.
- Checked LLM ratings against blind reference judgements; did not roll out a revised analysis after an incomplete measurement showed no proven improvement.
- Rollouts with checksums, tests before and after the swap, and automatic rollback.

Web & shop development for clients

Built websites and shops for clients — from design and interaction to multilingual content, legal requirements, CI and delivery.

- Frontend & interaction: Next.js, React, TypeScript, GSAP — hero as a frame sequence that turns with the mouse pointer (on phones via device tilt); full-screen chapters with dedicated mobile controls (nk247store.de).
- Shop & content: reworked a purchased Shopify theme in Liquid, CSS and JavaScript; own design layer in the live theme, three languages (DE/EN/FR), product data via metafields (duftkumpels.shop).
- SEO & email: Automated a Search Console analysis of search queries in DE/EN/FR, adjusted titles and metadata accordingly; fixed a Klaviyo abandonment email to link to a recoverable checkout. (duftkumpels.shop)
- Quality & delivery: CI with TypeScript check, ESLint, Vitest, build and Playwright (nk247store.de); weekly Lighthouse checks against the live shop via GitHub Actions (duftkumpels.shop).
- Performance: versioned assets, loading fallback, performance tuning to address stuttering (nk247store.de).
- Legal & content: tobacco advertising removed from all visuals per German law, § 19 TabakerzG (nk247store.de).
- AI tools: wrote the design brief, steered an AI website builder and refined the result myself — camera moves from real photos, colour grading, transitions (redesign draft for a Hamburg izakaya).
- References: duftkumpels.shop — project work since June 2026, changes in the live theme; nk247store.de — client project in a team, my redesign not yet published.

Further projects

- hermes-brett: task board plugin for Hermes Agent without a build step; a cost gate prevents the board from accidentally starting a paid agent run; deploy with rollback; self-test using only node:assert.
- Shinobi: Ember Accord — mobile idle RPG (React Native, Skia, Supabase, pgTAP). Agent-orchestrated: an AI agent works through 50 roles in lead mode, I make the product decisions.
- Interactive web CV — installable PWA without a framework: SVG displacement, canvas graph, WebGL fluid simulation (adapted from PavelDoGreat, MIT).

Experience

AI Automation & Web Development

2024 – present | Own projects, team and client projects | Hamburg / remote

- Developed and tested Python backends and Next.js frontends and ran them on Linux servers (Docker Compose, cron, deployment with rollback); customised Shopify themes; team work via branches, pull requests and shared test suites.

B2B Direct Sales (door-to-door)

2019 – 2023 | EWE TEL, Ranger Marketing | Field sales across Germany

- Cold outreach and needs assessment directly with owners and managing directors, negotiation and closing on site.
- Handling rejection every day — and an eye for the problems a business really has.

Training and project practice

- Web development course, 2024 (6 months): HTML, CSS, JavaScript, web architecture
- Google Ads Search Certification (Skillshop), December 2025, valid until 3 December 2026 – verifiable: <https://www.credential.net/cd05c77a-a7ef-48e0-809e-5147135f810e>
- Ongoing self-directed learning through own and shared software projects

Skills (used in projects)

- Development: Python, FastAPI, TypeScript, React, Next.js, React Native
- AI & agents: Claude Code, LLM APIs (Claude, Gemini, Groq), MCP, agent orchestration, n8n
- Data & jobs: PostgreSQL, SQLAlchemy/Alembic, Celery, Redis, Supabase
- Quality: pytest, Vitest, Playwright, GitHub Actions, Lighthouse CI
- Operations: Linux servers, Docker Compose, cron, flock, SMTP/IMAP, SPF/DKIM
- Web & commerce: Shopify Liquid, Tailwind, GSAP, PWA, Canvas/WebGL

Languages

- German: native · English: B1, working towards B2 · Polish: spoken
