VERFÜGBAR

Since 2024, I've independently designed, built, and operated AI-driven automation and software systems in production — from a live D2C Shopify store to my own orchestration platform. I own architecture, testing, and deployment myself, steering implementation through Claude Code. **Every system I list here is running, not prototyped.** Four years in B2B door-to-door sales before that taught me which problems in a real business are actually worth solving.

100%

SOLO-BUILT • NO TEAM, NO AGENCY

2+ yrs

CONTINUOUS PRODUCTION, NOT DEMOS

4 yrs

B2B SALES — THE INSTINCT UNDERNEATH

SELECTED SYSTEMS

- duftkumpels.shop — live Shopify D2C store** 2024 - present
Independent build · custom Liquid theme · bilingual DE/EN
— Built end-to-end: custom Liquid theme, custom metafields, Stripe checkout — **publicly live and open to inspect:**
duftkumpels.shop
- Ultra Nexus OS — personal orchestration platform** 2024 - present
Meta-system coordinating automation across every project
— Bi-temporal knowledge graph (Graphiti/FalkorDB) shared across all projects, plus **hard approval gates** — nothing sends or deploys without human sign-off, by design from day one.
— That review layer has already **caught a real credential leak and faulty deployments** before either went live.
- Interactive Web CV — standalone Progressive Web App**
— Installable PWA, custom glass-refraction rendering (SVG displacement filters), a living canvas graph, and a real GPU fluid simulation (Navier–Stokes/WebGL) — **one HTML file, zero frameworks**, this document's sister piece:
