Location Hamburg · Target: Zurich · EU citizen · Permit B, no quota

PROFILE

Since 2024 I've independently built automation and software systems with AI and taken them into production, from a SaaS backend to my own server infrastructure. From architecture through tests to deployment I **orchestrate AI like a small team** and check every result myself. Before that, four years in B2B direct sales: the daily customer front, where I learned which problem in a business actually hurts. I'm looking for a role in Zurich where I build AI automation, and my sales DNA means I build systems that get used in the real business, not just ones that technically impress.

In production

Systems running continuously, with deploy pipeline and watchdog, for over half a year.

In production, not in a notebook

24/7 on my own infrastructure, with approval gates and self-monitoring, not mocks.

Sales DNA

Four years at the customer front: I build what gets used, not what merely impresses.

SYSTEMS, INDEPENDENTLY DESIGNED & BUILT

Ultra Nexus OS: the operating system for all my work

META-SYSTEM

Not another tool, but the layer above it: a command center that orchestrates and automates my work across several business domains. I didn't just build systems, but the system that runs them.

Core: Mission-Control + CLI executive · **Memory:** bi-temporal knowledge graph (Graphiti/FalkorDB) · **Governance:** gate-everything, no agent sends or deploys without approval · **Judgment:** my verification layer caught a real secret leak & phantom deploys before they went live.

GEO Scanner: module of the web studio

BUILT IN DAYS

Analyzes whether a company appears in AI answers (ChatGPT, Perplexity): the new visibility for which no established SEO exists yet. Architecture to deployment on my own, in 6 weeks.

FastAPI · **Claude SDK** · **MCP**. Built as a module of the web studio, first line to tested system in days. I build against reality, not mocks.

Career Factory: multi-agent system, live

ON ULTRA NEXUS OS

A multi-agent system for live research and fact-checked content. It co-built this interactive CV. I built for myself what agencies sell.

Python · **Claude SDK** · **n8n**. 40-65% automated delivery, every factual line checked against a source of truth.

Shopify D2C commerce

IN PRODUCTION

DACH stores with a custom Liquid theme instead of a template, custom metafields, bilingual DE/EN. In production since late 2025, a further store in development as a client project.

Further systems

INFRASTRUCTURE & MEDIA

Game-server infrastructure (Hetzner, deploy pipeline, 6-stage test harness, watchdog, 6+ months in operation) · **AI video production pipeline** (rendering, speech synthesis, QA gates, 49 tests) · **PIM engine** for Shopify product data (in development).

— EXPERIENCE

AI Automation Builder, self-employed

2024 – present

Remote · clients and projects across the DACH region

- › **Automation and software systems independently designed and taken into production**, from SaaS to server infrastructure, no team, no agency budget.
- › **AI-orchestrated development**: I specify, architect, test and validate; Claude Code handles implementation. I deliver alone what would otherwise take a small team.
- › Client deliveries for DACH founders, from the first requirement to go-live.

B2B Direct Sales (Door-to-Door)

2019 – 2023

EWE TEL and Ranger Marketing (sales for Deutsche Telekom) · field sales nationwide

- › **Daily cold outreach to decision makers**, over 200 closes per month, rejection by the minute: resilience no course teaches.
- › 60% new-customer share, +15% revenue per existing customer through cross- and upselling. Conversations directly with owners and managing directors.

— SKILLS

› AI & Automation – core

Claude SDK & Claude Code (orchestrated end-to-end), MCP, n8n, multi-agent systems, Graphiti/FalkorDB, prompt design, spec-driven building & testing.

› Sales: the DNA underneath

Cold outreach, needs analysis, objection handling, closing, cross- & upselling, pipeline and KPI management. Conversations at decision-maker level.

› Technical Stack

Python, FastAPI, PostgreSQL, Playwright. I own architecture, testing and quality; I steer implementation through Claude Code.

› E-Commerce & Marketing

Shopify Liquid & theme development, Google Ads (Search, Performance Max, AI-Powered), conversion fundamentals.

— EDUCATION & TRAINING

Vocational training + ongoing development

My proof is what I build: systems running in production, not a diploma.

Google Ads Skillshop · Jan 2026: Search, Performance Max, AI-Powered Ads

Web Development training · 2024, 6 months: HTML, CSS, JavaScript, web architecture

Self-taught, ongoing · since 2024: I learn by building, not by courses.

— LANGUAGES & RELOCATION

German: native (C2)

English: B1, confident in conversation, growing toward B2

Polish: conversational

Target Zurich · relocating for the right role, flexible

EU citizen, Permit B: no quota, no lawyer, no hurdle for the employer.

Hiring me is as simple as hiring someone already living in Zurich.

Timing by arrangement.
