Location: Hamburg, Germany | Looking for: remote or on site in Zurich (relocation to Zurich possible) | Start date by arrangement

Profile

I build AI automation and store technology for daily operations – with tests, approvals and clean measurement. Freelance since 2024, before that four years of B2B sales. I'm a developer on the team behind Flowki Studio, an internal AI content studio, maintain a trilingual Shopify store and co-founded the AI community FlowKI Club. AI agents are my tools – I own requirements, tests and sign-off.

Key figures: 50 of my pull requests merged in the team (Flowki Studio, team project) · 700 URLs checked for indexing (client store, 3 languages) · about 66 members of the AI community I co-founded (as of 29 Sep 2026) · 4 years of B2B sales (2019–2023)

What I bring

- AI automation with control: workflows where AI produces and people approve – rights checked right before sending, success kept separate from follow-up errors.
- E-commerce SEO engineering: Shopify for three languages – translation pipeline, indexing, structured data and an abandonment email that leads back to checkout.
- Tests and safe rollouts: bugs first as a failing test, rollouts with checksums and a way back; AI agents implement, requirements and sign-off stay with me.

Core skills

- Backend & APIs: Python, FastAPI, SQLAlchemy/Alembic, PostgreSQL, Celery, Redis – APIs and background jobs
- Frontend: TypeScript, React, Next.js, Tailwind, GSAP – production, approval and publishing views, community website; client websites in a team (CI with TypeScript checks, ESLint, Vitest, Playwright)
- Testing & CI: Git, pytest, Vitest, Playwright, ESLint, GitHub Actions – bugs reproduced as a failing test first; CI also builds and checks this CV
- AI integration: LLM APIs (Claude, Gemini, Groq), MCP, Claude Code – FAQ bot with relevance check, MCP server, model ratings checked against blind reference judgements
- Operations: Linux servers, Docker Compose, cron – rollouts with checksums, tests before and after the swap and automatic rollback on caught errors
- Shopify & SEO: Liquid, Admin GraphQL API, Search Console, JSON-LD – translation pipeline, theme rework, SEO checks
- With AI agents: Claude Code implements, I review and sign off; hooks I set up block private keys in code as well as deleted or disabled tests, and a second model reviews
- Further tools: discord.js, React Native (personal project), Supabase, n8n, agent orchestration, Lighthouse CI, flock, SMTP/IMAP, SPF/DKIM, PWA, Canvas/WebGL

Experience

Co-founder — FlowKI Club, German-speaking AI community (Apr 2026 – present)

About 66 members on Discord (as of 29 Sep 2026), articles, online calls and joint project work – I combine community work with product development.

- Community: Onboarded new members and supported their AI projects, organised and moderated online calls.
- Made measurable: Newsletter with double opt-in and referral links; sign-ups and clicks on Discord invites tracked with Plausible; author, FAQ and HowTo markup.
- Discord bot & MCP server: Added /ask and self-service topic roles; connected club articles as the FAQ bot's knowledge base, with a relevance check that catches unsuitable matches; the MCP server makes the articles usable for AI assistants – public on GitHub.

Tools: TypeScript, discord.js, Claude API, MCP, PostgreSQL, Vitest, Next.js

Freelance Software Engineer — AI automation, web development & e-commerce, remote (2024 – present)

Technical support for an online store client, development in the internal team project Flowki Studio and client websites in a team with Next.js and GSAP.

Flowki Studio — internal AI content studio, team project (Aug 2026 – present)

- Rights before sending: Usage rights, consents and ad labelling were only checked at planning time, up to 14 days ahead – now re-checked right before sending, otherwise the post waits.
- Cost risk reduced: When only a status step failed after a successful production, it looked like a failure and invited a second, cost-incurring run – success and follow-up errors are now separate.
- Approvals & overview: Rejection reasons flow into the approval log; production, approval and publishing views show state, phase duration and required actions; checklists and open blind reviews per campaign in the daily overview.
- Video & publishing: Long videos are turned into vertical clips with speaker-following framing; TikTok drafts clearly separated from published posts.

Tools: Python, FastAPI, Celery, SQLAlchemy/Alembic, PostgreSQL, Redis, Next.js, TypeScript

duftkumpels.shop — Shopify store DE/EN/FR, client engagement (Jun 2026 – present)

- Three languages: Translation pipeline – extract texts, check their structure, import back into Shopify via CSV or GraphQL; availability checks via the Admin API with backups and read-back verification.
- SEO engineering: Automated a Search Console analysis, checked 700 URLs for indexing, added JSON-LD and checked it automatically.
- Misrouting narrowed down: EN/FR product pages redirect visitors to German (153 search clicks on English product pages in 90 days) – cause: a Shopify redirect that fires before the theme, documented for support.
- Abandoned checkouts: The Klaviyo abandonment email leads to a recoverable checkout again; reworked the theme in Liquid, CSS and JavaScript, weekly Lighthouse checks.

Tools: Shopify Liquid, Admin GraphQL API, Python, GitHub Actions, Klaviyo

Own products & contributions — Python, automation, quality (2026)

- Job matching and document pipeline: Rates jobs from job board APIs (including the German Federal Employment Agency, Greenhouse, Lever) and checks documents; LLM ratings checked against blind reference judgements, rollouts with checksums and automatic rollback on caught errors.
- hermes-studio (third-party project): Traced 21 failing tests to two root causes, deliberately kept a security rule, fixed silent data loss in the task store – passing tests 177 → 199.
- This CV: counts its own pull request figures daily and checks every version automatically before it goes online.

Evidence (German): case study LLM rating <https://jasonroschmann.github.io/cv/#fs-03> · case study debugging <https://jasonroschmann.github.io/cv/#fs-01>

Field Sales, B2B Direct Sales — EWE TEL, Ranger Marketing, across Germany (2019 – 2023)

- Direct sales: Cold outreach and needs assessment with owners and managing directors, negotiation and closing on site.
- Customer view: Handling rejection every day – and an eye for the problems a business really has.

Training, languages & proof of work

- Training: Web development (2024, 6 months): HTML, CSS, JavaScript, web architecture
- Certificate: Google Ads Search Certification (Skillshop), December 2025, valid until 3 Dec 2026 – verifiable: <https://www.credential.net/cd05c77a-a7ef-48e0-809e-5147135f810e>
- Languages: German (native) · English (B1, working towards B2) · Polish (spoken)
- Ways of working: Remote via GitHub (branches, pull requests), Discord and online calls
- GitHub: 61 of my pull requests merged (as of 29 Sep 2026): Flowki Studio 50, own repos 8, client projects 3
- Public code: web CV with build and checks <https://github.com/JasonRoschmann/cv> · MCP server for club articles <https://github.com/Jokersystems-online/flowki-knowledge-mcp>
